Summary

I am a Postdoctoral Scholar– [NSTC Fellow](#) at the [Signal Analysis and Interpretation Laboratory \(SAIL\)](#), at the [University of Southern California](#), working with [Prof. Shrikanth S. Narayanan](#), including the [Speech Production and Articulation Knowledge \(SPAN\)](#) effort. I received my Ph.D. in Electrical Engineering from [National Tsing Hua University \(NTHU\)](#), advised by [Prof. Chi-Chun Lee \(BIIC Lab\)](#). My dissertation, *Revisiting Modeling and Evaluation Approaches in Speech Emotion Recognition: Considering Subjectivity of Annotators and Ambiguity of Emotions*, received the [ACLCLP](#) Doctoral Dissertation Award, Honorable Mention. I am currently seeking full-time research and industry positions.

My work treats emotion labels as subjective, multi-label, and often disagreeing human judgments rather than a single ground truth. That program runs from annotator modeling and calibration (ICASSP, INTERSPEECH, IEEE TAFEC) through open evaluation ([EMO-SUPERB](#)) to fairness audits and a [survey of bias in speech AI](#). I also work on assistant-style speech systems (unified ASR + SER at [Amazon Alexa](#); on-device SER / KWS at [RealTek](#)), speech-LLM evaluation and resources, and first-author assessment of [speech enhancement for real-time MRI audio](#).

Authorship and contribution notes. Name in **bold** is Huang-Cheng Chou. [EMO-SUPERB / Open-Emotion](#) is equal-first with Haibin Wu. On [DeSTA2.5-Audio](#) I contributed the emotion-data stack (label schema and dimensional annotations), not the full model. On [Do You Hear What I Mean?](#) I led the core evaluation pipeline, not the TTS model. Papers marked Mentored are student-led work I advised. The APSIPA ASC Best Regular Paper Award (2019) is for [conversational deception detection](#), not later SER papers.

Research interests

- Speech emotion recognition under annotator subjectivity and emotion ambiguity: multi-label learning, soft labels, calibration, and evaluation rules that keep minority ratings.
- Speech / audio large language models: evaluation contracts, emotion-aware data, and downstream SER with speech LLMs.

- Fairness, bias, and reliability of speech systems (SER, TTS evaluation, speaker, and cross-task surveys).
 - Conversational and dyadic social signal processing: deception, belongingness, and clinical affect such as depression-related speech.
 - Multitask and edge speech systems: unified ASR + SER, keyword spotting, and compute-constrained on-device models.
 - Low-resource and multilingual speech (including [Taigi / Taiwanese Hokkien intent](#)).
 - Speech enhancement and downstream evaluation for [real-time MRI \(rtMRI\)](#) of vocal-tract shaping.
